

Instructions

- **don't use just for a wee.** Compost loos don't like too much liquid, so if all you want is a wee – please use one of the other toilets
- **please throw in a handful of sawdust after use.** This balances the carbon:nitrogen ratio and helps microbes to break the waste down
- **toilet paper is fine.** And so is the middle of the toilet roll
- **Please close lid after use**
- a compost toilet is good for the environment in three main ways:
 - ◇ diverts human waste from sewage works / rivers – doesn't need to be treated with chlorine or other chemicals
 - ◇ allows organic matter to go back to the soil where it belongs
 - ◇ saves water – you're not flushing away one resource (fertilizer) with another (pure drinking water)
